We keep the Automotive Industry running:
Dynamically, efficiently and innovatively

For more than 10 years now, Modix is the number one in digital marketing of automobiles and offers manufacturers and dealers solutions for online sales and marketing worldwide.
We are part of the US-based Cox Group and can rely on the network and possibilities of an international enterprise and combine this with the flexibility and individual support of a company under owner management.

Become a part of our team
Platform Architect (m/f/d)

This is where you work!
- Our platform team is always up-to-date and familiar with the latest technical standards.
- Our CMS is based on a service-oriented architecture.
- PHP, Laravel/Lumen, Docker und Kubernetes are our technologies.
- Through continuous integration we ensure that our work is of highest quality.
- We organize our projects with Scrum with agility.
- We use a MacBook Pro with PHPStorm.
- Our backend team works closely together and tackles every challenge together.

This is what you do!
- You provide the latest technologies to our Digital Production Teams worldwide and you help to plan and develop our CMS.
- You commit yourself to the analysis of technical concepts regarding architecture, specifications and implementation.
- You organize inhouse training classes to implement new technologies.
- You develop migration strategies for legacy systems.
- You support us in scaling the development teams that are distributed around the globe.
- You are responsible for the quality and documentation of your work results.
- You track up-to-date technical trends and evaluate possible applications in Modix.

These are your abilities!
- A successfully completed degree in Computer Science
- Or: a completed training as an IT specialist for development of applications
- Extensive experience in object-oriented PHP software development
- Proficient in PHP frameworks (Symfony, Laravel)
- Fundamental knowledge of software architectures in general and experience with service-oriented architectures
- Safe handling of Git and Docker as well as experience with test automation

- Excellent German and English writing and verbal communication skills
- Experience with Kubernetes and Helmchart of advantage
- Preferable experience with Linux and the development of performance-optimized and high-availability systems
- Experience in dealing with REST API's and Swagger or Open API as well as Apache Thrift of advantage

This is what we offer!
- Personal development and regular trainings
- Chances of promotion in an innovative company
- Trust-based working hours
- Optimal Equipment
- Reimbursement of moving costs by relocation to the region
- Regularly held employee events
- Pioneer spirit and joy on the job in a technology-minded team
